

Hours/Sem.	Code : 22UBT501C	Bioinformatics	Semester : 5
	LTP : 3:0:0		Course Type : PCC
	Teaching : 42Hrs.		CIE Marks : 50
	Learning : 42Hrs. (TW+SL)		SEE Marks : 50
	Exam : 6Hrs.		Total Marks : 100
	Total Hrs. : 90Hrs.		Credits : 03

Professional Competency:

Combining biology, statistics, and computer science to analyze complex biological data. This skillset is in high demand for drug discovery, clinical diagnostics, and precision medicine, offering a competitive edge for both industry and academic roles

Course Outcomes:

After completion of the course, student will be able to:

1. Analyze the data bases involved in bioinformatics along with their file formats.
2. Identify similar sequences in data bases and find similarity between given set of sequences and they understand how to utilize programming for BIG Data management
3. Construct phylo-genetic tree and analysis and use of statistical tools in predicting the structure of genes and proteins.
4. Apply restriction mapping and primer designing, approaches involved insilico drug design and genome assembly.

UNIT-I

10 Hrs.

INTRODUCTION TO BIOINFORMATICS AND BIOLOGICAL DATABASE

Introduction : To bioinformatics, Components of bioinformatics and interdisciplinary nature of bioinformatics, Classification of biological databases; Primary database: NCBI, Gen Bank, DDBJ and EMBL, PIR, Uniprot; Secondary databases: PROSITE, PRINTS, BLOCKS and Pfam; Structure data bases: Protein Data Bank (PDB), MMDB, CATH, SCOP; Specialized databases: Pub Med, OMIM, Metabolic Pathway-KEGG; ExPasy and Pub Chemdata bases, File format: Gen Bank flat file, PDB flat file. Tutorials: Practices on other primary and secondary databases.

UNIT-II

10 Hrs.

PROGRAMMING FOR BIG DATA MANAGEMENT AND DATABASE SEARCHES,

SEQUENCE ALIGNMENT: Python and R: Deep focus on advanced libraries (Biopython, Pandas, Scikit-Learn, Bioconductor). Cloud & Workflow Management: Using platforms like AWS or Google Cloud for biological big data; implementation of reproducible pipelines (Nextflow or Snakemake). Biological Big Data: Data management strategies for petabyte-scale genomic datasets
Introduction, Types of sequence alignment, Comparison between global and local alignment, Pair wise sequence alignment: Dot matrix analysis, Dynamic programming, Global alignment-Needleman-Wunch algorithm, Local Alignment-Smith & Waterman algorithm, Substitution matrix-BLOSUM and PAM; GAP Penalty; Low complexity regions; Word/k-tuple method-BLAST, FASTA. Multiple Sequence Alignment: Introduction, applications of MSA; Types of MSA: Progressive method of MSA-Clustal W; Iterative method of MSA; Motifs and Patterns; Statistical models of MSA-Position Specific Scoring Matrix (PSSM) and Profiles. Tutorials: Solving problems on pair wise sequence alignment and use of programming for BIG Data

UNIT-III

12 Hrs.

PHYLOGENETIC ANALYSIS AND PREDICTIVE METHODS USING SEQUENCES,

Introduction, concepts of trees, types of evolutionary trees, Rooted and un rooted trees, Steps in constructing phylogenetic trees, Tree building methods - Distance based methods: Neighbor Joining (NJ) method, Fitch Margoliash (FM) method; Character based method: Maximum parsimony; Tree Evaluation methods, Phylogenetic Softwares. Predictive Methods using sequences: Structure of Prokaryote and Eukaryote genes; Algorithms for Prokaryotic and Eukaryotic gene prediction, Web based tools for gene prediction (ORF finder, Gensan). Protein Secondary Structure Prediction, Tertiary Structure Predictions: Homology modeling. Tutorials: Practices on prediction of phylogenetic trees

UNIT-IV		10 Hrs.
PLASMID MAPPING, PRIMER DESIGNING & MOLECULAR MODELING		
TECHNIQUES: Restriction mapping, Web based tools: Restriction Mapper and REBASE. Basics of Primer designing, Primer design softwares (PRIME3). Rational Approaches in Drug Design, molecular docking, deriving the Pharmacophoric Pattern, quantitative structure-activity relationship (QSAR), deriving bioactive conformations, Calculation of Molecular Properties, Docking softwares (AUTO DOCK, HEX), genome assembly and annotation: Databases: Specialized databases like KEGG, WIT, and COGs can function as annotation tools, Tools for domain identification: CDD and SMART, BUSCO Tutorials:Solving problems related to Restriction mapping and Primer designing

	Exam : 06 Hrs		Total Marks : 100
	Total Hrs. : 90 Hrs		Credits : 03

Professional Competency:

Design and apply biological systems using microorganisms and plants to treat waste, clean up environmental pollutants, recover metals, and conserve biodiversity.

Course Outcomes:

After completion of the course student will be able to

CO1: Interpret the scope of Environmental Biotechnology and concepts of Bioaccumulation.

CO2: Develop different treatment methods for waste water and solid waste by using BT approach.

CO3: Apply bioleaching process for metal recovery and bioremediation processes to remove environmental contaminants.

CO4: Identify and apply BT approach for biodiversity conservation.

UNIT-I

10 Hrs.

INTRODUCTION

Issues and scope of Environmental BT. Interactions among soil microorganisms, biogeochemical role of soil microorganisms.

BIOACCUMULATION OF TOXICANTS

Characteristics of Xenobiotics, Relationship of Bioaccumulation with Chemical Structure, Ecophysiology of Bioaccumulation, Process of toxicants uptake, Factors affecting bioaccumulation, measurement of bioaccumulation.

UNIT-II

12 Hrs.

BIOLOGICAL TREATMENT OF WASTE WATER

Waste water characteristics BOD, COD, Primary & Secondary treatment, nanofiltration, ultrafiltration and microfiltration. Microbial removal of phosphorous and Nitrogen, Nutrient removal by Biomass production Wastewater treatment of food processing industries like sugar factories, vegetable oil industries, potato processing industries, dairy industries, beverages industries, and distilleries.

SOLID WASTE MANAGEMENT

Basic aspects, general composition of urban solid wastes, aerobic treatment, anaerobic treatment, biogas generation; Solid waste management through Biotechnological processes involving Hazardous wastes, Biomedical wastes, MoEF rules.

UNIT-III

10 Hrs.

BIOLEACHING & BIOMINING

Microbes in Bioleaching- types, methods of bioleaching, Microbial recovery of metal, phosphate, petroleum.

BIOREMEDIATION:

Major contaminants of air, water and soil, Biomonitoring of environment (Bioindicators), Bioremediation using microbes, Phytoremediation, Biofilms its applications. Bio-stimulation of Naturally occurring microbial activities, Bio-augmentation.

UNIT-IV		Hrs.	
BIOTECHNOLOGY IN BIODIVERSITY CONSERVATION		Value of biodiversity, threats to biodiversity, Biosphere reserves and Ecosystem Conservation, Approaches to Bioresource conservation programme, Biotechnological processes for bioresource assessment, BT in ex situ conservation of Biodiversity, BT and its role in utilization of Biodiversity, International initiatives for biodiversity management.

	Teaching : 42Hrs.		Type
	Learning : 42Hrs.		CIE Marks : 50
	(TW+SL)		SEE Marks : 50
	Exam : 6Hrs.		Total Marks : 100
	Total Hrs. : 90Hrs.		Credits : 03

Professional Competency:

Bridges the gap between nutrition and pharmaceuticals. Imparts multidisciplinary skill set encompassing evidence-based evaluation, regulatory compliance, product formulation, and targeted health applications

Course Outcomes:

After completion of the course student will be able to

1. Analyze the basic concepts of nutraceuticals and nutrition.
2. Analyze the scope of nutraceuticals and functional foods and identify the nutrition related health disorders and the role of Nutraceuticals.
3. Comprehend the classification of nutraceuticals and the role of nutraceuticals among different age groups and the basic aspects of nutraceuticals derived from microbial, plant and animal origin.
4. Distinguish about the role of biotechnology in production of plant secondary metabolites.

UNIT-I

10 Hrs.

INTRODUCTION TO NUTRACEUTICAL AND DIETETICS

Organizational elements, classification of nutraceuticals, dietary supplements, fortified foods, functional foods and Phyto nutraceuticals. Scope involved in the industry, Indian and global scenario. Recommended dietary intake (RDA), acceptable dietary intake, nitrogen balance, protein efficiency ratio, net protein utilization. Basics of energy balance - Basal Metabolic Rate (BMR), Body Mass Index (BMI) and Standard Dynamic Action (SDA) with special reference to nutraceutical industry.

UNIT-II

12 Hrs.

NUTRITION RELATED DISEASES AND DISORDERS

Carbohydrates, Protein, amino acids, Fat, vitamins and minerals - Excess and deficiency, symptoms, prevention and management. Role of nutraceuticals with special reference to diabetes mellitus, hypertension, hypercholesterolemia, cancer, glands in the prevention and treatment. Concept of antioxidants - use of

antioxidants as dietary supplements in prevention and treatment of cancer, obesity and stress. Role of nutraceuticals and functional foods in pediatrics, geriatrics, sports, pregnancy and lactation.

UNIT-III

10 Hrs.

NUTRACEUTICALS OF MICROBIAL, PLANT AND ANIMAL ORIGIN

Concept of prebiotics and probiotics - principle, mechanism, production and technology involved, applications - examples of bacteria used as probiotics, use of prebiotics in maintaining the useful microflora - extraction from plant sources. Synbiotics for maintaining good health. Algae as source of omega - 3 fatty acids, antioxidants and minerals - extraction and enrichment. Plant secondary metabolites, classification and sub-classification - Alkaloids, phenols, Terpenoids. Animal metabolites - Sources and extraction of nutraceuticals of animal origin.

Examples: chitin, chitosan, glucosamine, chondroitin sulphate and other polysaccharides

UNIT-IV

10 Hrs.

BIOTECHNOLOGY IN PHYTONUTRACEUTICALS

Role of medicinal and aromatic plants in nutraceutical industry – propagation - conventional and tissue culture, cultivation, post-harvest technology and strategies for crop improvement, development of high yielding lines and yield enhancement, plant genomics and metabolomics. Biofortification and nutritional enhancement. GM foods with enhanced nutraceutical properties. Golden rice, GM Tomatoes

Professional Competency:

Professional Competency: Formulating biological hypotheses from data, developing algorithmic solutions, and applying machine learning to complex datasets like genomics and structural biology

Course Outcomes:

After completion of the course student will be able to

1. Understand the nature, scope of computational biology and biological and computer algorithms.
2. Know about the Combinatorial Pattern Matching, Genetic algorithms and their applications.
3. Analyze various Markov processes and Markov Models.
4. Learn about the Insilico Drug Design and Biopython applications in Computational Biology

UNIT-I

10 Hrs.

NATURE AND SCOPE OF COMPUTATIONAL BIOLOGY

Basic algorithms in Computational Biology, Biological and Computer algorithm, Fibonacci problem, Dynamic Programming, Time and space complexity of algorithms, Laplace's Rule. Search Algorithms: Random walk, Hill climbing, simulated annealing. Combinatorial Pattern Matching: Hash Tables, Repeat Finding, Exact Pattern Matching; Genetic Algorithm: Basic Concepts, Reproduction, Cross over, Mutation, Fitness Value, Optimization using GAs; Applications of GA in bioinformatics.

UNIT-II

10 Hrs.

COMBINATORIAL PATTERN MATCHING

Hash Tables, Repeat Finding, Exact Pattern Matching; Genetic Algorithm: Basic Concepts, Reproduction, Cross over, Mutation, Fitness Value, Optimization using GAs; Applications of GA in bioinformatics.

UNIT-III

12 Hrs.

HIDDEN MARKOV MODEL

Markov processes and Markov Models, Hidden Markov Models. Forward and Backward Algorithms, Most probable state path: Viterbi algorithm, Parameter Estimation for HMMs:-Baum-Welch Algorithm, Applications of profile HMMs for multiple alignment of proteins and for finding genes in the DNA.

UNIT-IV

10 Hrs.

INSILICO DRUG DESIGN AND BIOPYTHON APPLICATIONS IN COMPUTATIONAL BIOLOGY

Insilico Drug Design: Basic Concepts, importance and application, Molecular force fields and energy minimization, Molecular Dynamics Simulation methods, Methods of Insilco Drug Design: structure and ligand based drug design approach, structure-based drug design: Molecular docking. Biopython: Introduction, important features and application of biopython in computational biology, Create a simple sequence in Biopython for DNA, RNA and Protein Alphabets, Sequence Alignment Tools in Biopython, PDB Module of Biopython.

	Total Hrs. : 90Hrs.		Credits : 03
Professional Competency:			
Developing protein engineers are tasked with designing diverse drug designing platforms			
Course Outcomes:			
After completion of the course, student will be able to:			
1. Perform protein structure prediction and protein engineering and design.			
2. Understand molecular modeling.			
3. Know computer assisted new lead design.			
4. Identify docking methods and computer - assisted drug discovery.			
UNIT-I			10 Hrs.
STRUCTURE OF PROTEINS Overview of protein structure, PDB, structure based classification, databases, visualization tools, structure alignment, domain architecture databases, protein-ligand interactions. PROTEIN STRUCTURE PREDICTION Primary structure and its determination, secondary structure prediction and determination of motifs, profiles, patterns, fingerprints, super secondary structures, protein folding pathways, tertiary structure, quaternary structure, methods to determine tertiary and quaternary structure, post translational modification. PROTEIN ENGINEERING AND DESIGN Methods of protein isolation, purification and quantitation; large scale synthesis of proteins, design and synthesis of peptides, use of peptides in biology, methods of detection and analysis of proteins. Protein database analysis, methods to alter primary structure of proteins, examples of engineered proteins, protein design, principles and examples			
UNIT-II			12 Hrs.
MOLECULAR MODELING Constructing an Initial Model, Refining the Model, Manipulating the Model, Visualization. Structure Generation or Retrieval, Structure Visualization, Conformation Generation, Deriving Bioactive Conformations, Molecule Superposition and Alignment, Deriving the Pharmacophoric Pattern, Receptor Mapping, Estimating Biological Activities, Molecular Interactions: Docking, Calculation of Molecular Properties, Energy Calculations (no derivation), Examples of Small Molecular Modeling Work, Nicotinic Ligands, Sigma Ligands, Antimalarial Agents.			
UNIT-III			12 Hrs.
INSILICO DRUG DESIGN Generation of Rational Approaches in Drug Design, Molecular Modeling: The Second Generation, Conceptual Frame and Methodology of Molecular Modeling, The Field Currently Covered, Importance of the "Bioactive Conformation", Molecular Mimicry and Structural Similarities, Molecular Mimicry, Structural Similarities and Superimposition Techniques, Rational Drug Design and Chemical Intuition, An Important Key and the Role of the Molecular Model, Limitations of Chemical Intuition Major Milestones and Future Perspectives. COMPUTER ASSISTED NEW LEAD DESIGN Introduction, Basic Concepts, Molecular Recognition by Receptor and Ligand Design, Active Conformation, Approaches to Discover New Functions, Approaches to the Cases with known and unknown receptor structure			
UNIT-IV			10 Hrs.
DOCKING METHODS Program GREEN Grid: Three -Dimensional Description of Binding Site Environment and Energy Calculation, Automatic Docking Method, Three-Dimensional Database Search Approaches, Automated Structure Construction Methods, Structure Construction Methods with known Three-Dimensional Structure of the Receptor, Structure Construction in the case of Unknown Receptor Structure. Scope and Limitations, Points for Consideration in Structure, Construction Methods, Handling of X-Ray Structures of Proteins, Future Perspectives, Types of programs			

available for molecular modeling-scope and limitations-interpretation of results.

COMPUTER - ASSISTED DRUG DISCOVERY The Drug Development Process, Introduction, The Discovery and Development Process, New Lead Discovery Strategies, Composition of Drug Discovery Teams, The Practice of Computer-Assisted Drug Discovery (CADD), Current Practice of CADD in the pharmaceutical Industry, Management Structures of CADD Groups, Contributions and Achievements of CADD Groups, Limitations of CADD Support, Inherent Limitations of CADD Support, State of Current Computational Models, Software and Hardware Constraints

Professional Competency:							
Graduate will apply the principles of biofuel science and technology to evaluate feedstocks, production processes, technological innovations, and the economic and environmental sustainability of biofuels for renewable energy applications							
Course Outcomes:							
After completion of the course, student will be able to:							
CO1: Understand the basic principle involved in bioconversion process in energy and to differentiate the conventional fuels with biofuels .							
CO2: Diagnose the types of feed stocks used for biofuels.							
CO3: Produce the biofuels (biodiesel, bio alcohol biogas and biohydrogen) using current technologies and innovations involved							
CO4: Understand and recall current issues related with production and use of biofuels, Research opportunities, economic feasibility of the biofuels							
UNIT-I							10 Hrs.
BIOCHEMISTRY OF BIOFUELS AND ENERGY RESOURCES							
Basic principle of light energy conversion to chemical energy & carbon fixation. Biochemistry involved in conversion of sugars to alcohols. Renewable and non-renewable resources.							
BIOFUELS							
Introduction to Biofuels - definition, advantages and disadvantages. Biofuel life cycle. Biomass as an energy core and its different mode of utilization. Conventional fuels and their environmental impacts. Modern fuels and their environmental impacts. Biofuel energy content. World scenario of biofuel production and use.							
UNIT-II							12 Hrs.
BIOFUEL FEED STOCKS							
Starch feed stocks-cereal grains, tubers & roots; Sugars feed stocks-sugarcane & sugarbeet; cellulosic feed stocks - forest residues, agricultural residues, Agricultural processing by-products, dedicated energy crops, municipal solid waste and paper waste. Lipid feed stocks :-Oilseed crops with examples, Algae, Waste oil, Animal fats. Next generation feed stocks. Environmental impacts of feed stocks.							
TYPES OF BIOFUELS							
First generation biofuels-vegetable oil biodisel, bioalcohols, bioethers, biogas syngas, solid biofuels. Second generation biofuels and third generation biofuels.							
UNIT-III							10 Hrs.
TECHNOLOGIES FOR BIOFUELS							
Historical background. Biochemical platform – bioethanol production, standardization, emissions and properties of bioethanol. Thermochemical platforms - biodiesel production, standardization, properties and emissions of biodiesel. BtL fuels -production, properties and emissions. Biohydrogen processing and uses. Converting solid wastes to pipeline gas. Biomethanation, Microbial fuel cells. Blending of biofuels							

UNIT-IV												10 Hrs.		
BIOFUELS IN PERSPECTIVE														
Integrated refining concepts with reference to ethanol production. Economic feasibility of producing biodisel, Issues with biofuel production & use. Impact of biofuel in global climate change & food production. 1st versus 2nd generation biofuels. Strategies for new vehicle technologies. Current research on biofuel production. Market barriers of biofuels.

Course Code		:	22UBT507C	Bioethics, Biosafety and Regulatory Affairs	Semester	:	05
L:T:P		:	3:0:0		Course Type	:	PCC
Hours/Sem.	Teaching	:	42 Hrs		CIE Marks	:	50
	Learning (TW+SL)	:	42 Hrs		SEE Marks	:	50
	Exam	:	06Hrs		Total Marks	:	100
	Total Hrs.	:	90		Credits	:	03

Professional Competency:

Graduates will apply principles of Bioethics, Biosafety protocols and national/international regulatory guidelines to plan, conduct and evaluate research and biotechnological applications responsibly.

Course Outcomes:

1. Apply the knowledge of the basic aspects of hazards and safety in Industries and use the safety measures at work place.
2. Apply the basics of Bioethics & Legal Issues in the field of Biotechnology.
3. Apply the knowledge of Biosafety and Biosafety regulation guidelines for the research pertaining to applications in Biotechnology.
4. Comprehend the various regulatory requirements and Regulatory Affairs required in the field of Biotechnology.

UNIT-I

10 Hrs.

Safety:

Need for safety, importance of occupational safety, unsafe conditions, Factors contributing to unsafe conditions. Good Lab Practices (GLP).

Accidents: Accident preventive measure, Measurement and control of safety performance, 5E's for accident prevention Safety policy Engineering, Education, Enthusiasm, Enforcement and Evaluation. Hierarchy of Controls. Conflict resolution techniques.

Fire: Classification of fire, Fire extinguishers, fire extinguishing agents, Evacuation procedure for workers during emergency.

Chemical Hazards- Classification of chemicals based on their nature, routes to exposure of chemicals, Health effects of harmful chemicals in the work environment, Control of chemical hazards. Classification of Occupational health hazards.

UNIT-II

10 Hrs.

Introduction to Bioethics & Legal Issues:

Scope of bioethics. Legal and Socio- Economic impacts of Biotechnology. Convention on biological weapons. Bioterrorism-classification of biological agents with examples. Bioethics vs. business ethics. Procedure to apply patent, Copy right, Plant Breeder's Right. Risk groups, risk assessment during laboratory research. Laboratory associated infections and other hazards. Recombinant organisms and transgenic crops with examples. Genetically modified organisms and their release in environment, Containments; Physical and Biological. Field trial methods using transgenic Plants. Guideline for labeling GM crops.

UNIT-III

10 Hrs.

Introduction to Biosafety and Biosafety regulation guidelines:

Definition and scope of biosafety need for biosafety, Biosafety guidelines- national guidelines, Recombinant DNA Advisory Committee (RDAC), Institutional Biosafety committee (IBC), Review Committee on Genetic Modification (RCGM), Genetic Engineering Approval Committee (GEAC), Biosafety assessment procedures for biotech foods. Cartagena Protocol on Biosafety. HACCP system, Biosafety levels for microorganism BL1, BL2, BL3, BL4) plants (BL1-P, BL2-P, BL3-P, BL4-P) animals (BL1-N, BL2-N, BL3-N, BL4-N). Classification of dangerous materials with pictorial symbols. Safety in transportation of

dangerous materials by road, rail, ships and pipelines.

UNIT-IV

10 Hrs.

Regulatory Affairs:

The Fundamentals of Regulatory Compliance with respect to Good Clinical Practice (GCP) & Good Manufacturing Practice (GMP) FDA, FAO, CDER. ICH guidelines- Storage conditions, Photostability testing, Introduction to the Basic Concepts of Process Validation & how it Differs from Design Qualification (DQ), Installation Qualification (IQ), Operation Qualification (OQ), Performance Qualification (PQ) Procedures. A Review of Prospective, Concurrent, Retrospective Validation & Revalidation.

Hours/Sem.	Code : 22UBT508L	Bioinformatics Lab	Semester : 5
	LTP : 0:0 :2		Course Type : PCCL
	Teaching : 26 Hrs.		CIE Marks : 50
	Learning (TW+SL) : -		SEE Marks : 50
	Exam : 4 Hrs.		Total Marks : 100
	Total Hrs. : 30 Hrs.		Credits : 01

Professional Competency:

Integrating biological domain knowledge with computational tools and statistical methods to solve complex life science problems. Building practical expertise bridges traditional lab work with IT, opening doors in biotechnology, pharmaceuticals, and precision medicine

Course Outcomes:

After completion of the course, student will be able to:

CO1-Search literature and sequence databases.

CO2-Retrieve and search sequences from databases.

CO3-Align pair wise and multiple sequences. Evaluate the evolutionary relationships and functional sites in genomes.

CO4-Carry out primer designing and restriction mapping. Perform Docking and superimpose the structures.

List of Experiments OR Programs List

1. Bibliographic search from PUBMED, SCIRUS and MEDMINER
2. Sequence retrieval from Nucleic acid and Protein databases.
3. Sequence searches using BLAST – Retrieval of homologs, paralogs, orthologs, and Xenologs
4. Pair wise comparison of sequences – Analysis of parameters affecting alignment.
5. Multiple alignments of sequences and pattern determination using PROSITE 6. Evolutionary studies / Phylogenetic analysis – Analysis of parameters affecting trees.
6. Identification of functional sites in Genes / Genomes.
7. Secondary structure prediction of proteins and comparison with PDB. 9. Restriction mapping: Analysis of maps for suitable molecular biology experiment. 10. Primer Design: Factors affecting primer design.
8. PDB structure retrieval and visualization: Analysis of homologous structures. 12. Determination of ligand-protein interactions using SPDBV/ LIGPLOT 13. Superposition of structures – Calculation of RMSD.
9. Docking studies – Analysis of substrate / ligand binding using homologous structures.

Professional Competency:			
Develop the ability to analyze environmental issues and implement sustainable solutions by applying environmental science principles, pollution control measures, and environmental legislation.			
Course Outcomes:			
After completion of the course, student will be able to:			
CO1: Identify natural resources and its uses.			
CO2: Understand pollution and its effects on environment and to implement sustainable future in the work place.			
CO3: Analyze current environmental issues.			
CO4: Apply the waste management techniques in various fields.			
UNIT-I			10 Hrs.
Natural Resources:			
Human activities and their impacts. Environmental Impact Assessment, Renewable Energy: Solar, Wind, Hydropower, Tidal, Ocean thermal, Geo thermal, Biomass energy, Biogas, Biodiesel, Bioethanol, Hydrogen as fuel.			
Non renewable Energy: Coal, Petroleum, Natural gas, Nuclear energy.			
UNIT-II			12 Hrs.
Environmental Pollution:			
Water pollution, water quality standards, water borne diseases, Fluoride problem, Air pollution, Noise pollution. Effect of electromagnetic waves.			
Sustainable future: Concept of sustainable development, threats to sustainability, strategies for sustainable development, Sustainable development goals (SDGs). Environment economics – concept of green building, Circular Economy.			
UNIT-III			10 Hrs.
Current Environmental Issues of concern:			
Greenhouse Effect- Greenhouse gases and Global Warming, Climate change, ozone layer depletion, Acid rain, Eutrophication			
Environmental policy legislation rules & regulations			
UNIT-IV			Hrs.
Fundamentals of Waste management:			
Solid waste management: Sources, classification, characteristics, collection & transportation, disposal, and processing methods. Hazardous waste management and handling.			
Concept of waste water treatment, Bioremediation.			
Industrial waste management (Case studies: Cement, plastic, chemical, E–waste, food & construction industry waste management).			
Text Books:			
1. Benny Joseph, Environmental Studies, 3rd Edition, McGraw Hill Education (India) Pvt. Ltd., 2017.

Professional Competency:			
Apply fundamental biotechnological principles, research methodology, ethical practices, and scientific communication skills to plan, execute, analyze, and present a mini research project that addresses a defined biotechnology problem using a systematic and professional approach.			
Course Outcomes:			
After completion of the course, student will be able to:			
CO 1: Apply Biotechnological principles and techniques to design and conduct experiments.			
CO 2: Able to develop research skills and methodical approach to maintain for the collection, storage and analysis of data.			
CO 3: Able to demonstrate an awareness of ethical issues associated with their chosen field of research.			
CO 4: Able to develop and demonstrate the ability to effectively communicate written and oral presentations scientifically			

Hours/Sem.	Code	: 22UBT601C	Bioprocess and Bioreaction Engineering	Semester	:	06
	LTP	: 3:0:0		Course Type	:	PCC
	Teaching	: 42 Hrs.		CIE Marks	:	50
	Learning (TW+SL)	: 42 Hrs.		SEE Marks	:	50
	Exam	: 6 Hrs.		Total Marks	:	100
	Total Hrs.	: 90 Hrs.		Credits	:	03
Professional Competency:						
Ability to apply Engineering and Biological principles to design, scale up, optimize, and operate bioreactor systems for the efficient production of biopharmaceuticals, biofuels, and industrial biomolecules while ensuring economic viability, safety, and regulatory compliance.						
Course Outcomes:						
After completion of the course, student will be able to:						
CO1: Formulate kinetic expressions for cell growth, substrate consumption, and product formation to simulate bioprocess profiles.						
CO2: Apply fundamental design equations to size and evaluate performance criteria for Batch, CSTR, and PFR configurations.						
CO3: Select appropriate bioreactor configurations for specific industrial bioprocess operations.						
CO4: Quantify gas-liquid mass transfer rates and design aeration/agitation systems to prevent oxygen starvation in high-density cultures.						
UNIT-I					10 Hrs.	
Kinetics of Microbial Growth and Media Sterilization						
Microbial Kinetics: Stoichiometry of cell growth and product formation; elemental balances; electron balances and theoretical oxygen demand. Growth kinetics: Batch Growth, Balanced Growth, Effect of Substrate Concentration, Substrate utilization, Biomass production, Monod model and other growth models.						
Product Formation and Substrate Kinetics: Growth-associated, non-growth-associated, and mixed-growth-associated product formation. Maintenance coefficient and yield concepts ($Y_{X/S}$ and $Y_{P/S}$)						
Bioprocess Sterilization: Kinetics of thermal death of microorganisms and nutrient degradation. Design of batch sterilization processes (Del factor, sterilization time calculation). Design of continuous sterilization processes (plug flow and adiabatic sterilizers). Air sterilization: mechanisms of filtration, design of fibrous air filters						
UNIT-II					12 Hrs.	
Ideal Reactor Engineering and Design Equations						
Operating Characteristics of Ideal Reactors: General features, comparisons, and operational workflows of Ideal Batch Reactor, Semi-Batch (Fed-Batch) reactor, Continuous Stirred Tank Reactor (CSTR / Mixed Flow Reactor), and Plug Flow Reactor (PFR).						
Fed-Batch and Continuous Operations: Chemostat kinetics, critical dilution rate, cell washout phenomena. Chemostat with cell recycle. Fed-batch operations: constant, exponential, and feedback feeding strategies for high cell density cultivation.						
Core Performance Equations: Basic design equations linking concentration and conversion (C_A and X_A). Basic equation for Batch, PFR and CSTR, Performance equations for steady-state Batch reactors operating at constant volume and density.						
Flow Metrics: Formulation of Batch cycle time. Definition, mathematical expressions, and derivation of Space-Time, Space-Velocity, and Holding Time for flow reactors (CSTR and PFR).						
UNIT-III					12 Hrs.	
Bioreactor Configurations, Monitoring, and Control						

Mechanically Driven Bioreactors: Stirred Tank Bioreactor (STR)—geometry, impeller types (Rushton turbine, hydrofoil), baffling, etc.

Pneumatic and Non-Stirred Bioreactors: Bubble Column reactors; Airlift Bioreactors (internal loop and external loop configurations, riser and downcomer fluid dynamics).

Immobilized and Heterogeneous Systems: Stirred and air-driven configurations including Packed Bed, Fluidized Bed, and Trickle Bed bioreactors.

Instrumentation and Bioprocess Control: On-line, in-line, and off-line sensors. Monitoring and control loop configurations for physical variables (temperature, pressure, volume/level, agitation speed), chemical variables (pH, DO, redox potential, exhaust gas analysis for O₂ and CO₂), and biochemical variables (biomass concentration via optical density).

UNIT-IV

Hrs.

Mass and Heat Transfer in Bioreactors

Oxygen Transfer Operations: The demand for dissolved oxygen (DO) in aerobic cultures. Critical oxygen concentration. Two-film theory for gas-liquid mass transfer. Mass-transfer equations: Volumetric oxygen mass-transfer coefficient (kLa). Determination of kLa: Experimental methods to measure kLa (Sulphite oxidation, Static gassing-out, Dynamic gassing-out, and Oxygen balance method).

Heat Transfer: Biological heat generation (Q_{gr}) during fermentation. Heat transfer requirements, cooling jackets, internal coils, and heat exchangers. Calculation of heat transfer coefficients in bioprocess vessels.

Reference Books:

1. Bioprocess Engineering: Basic Concepts – Michael L. Shuler, Fikret Kargi, and Matthew DeLisa (Prentice Hall).
2. Chemical Reaction Engineering – Octave Levenspiel (John Wiley & Sons).
3. Bioprocess Engineering Principles – Pauline M. Doran (Academic Press).
4. Biochemical Engineering Fundamentals – James E. Bailey and David F. Ollis (McGraw-Hill).

Professional Competency:

Course Outcomes:

1. Identify the component parts of fermentor and fermentation system.
2. Select the raw material, prepare and sterilize the media and also to optimize the industrial media using Design of experiments.
3. Develop/design the industrially important microbes for industrial scale processes.
4. Operate the reactors for Plant, Animal and GMOs.

UNIT-I

FERMENTATION PROCESS

Scale Up: Process engineering concepts, engineering considerations, mechanical considerations, energy considerations. Process GMP considerations of scale up, operations and quality.

UNIT-II

RAW MATERIALS AND MEDIA

UNIT-III

MICROBIAL SYSTEM

SECONDARY METABOLITE PRODUCTION: secondary metabolite production in bacteria, yeast and fungi. Production of lactic acid, butanol, antibiotics and enzymes.

UNIT-IV

PLANT CELL SYSTEM

ANIMAL CELL SYSTEM

Perfusion culture (fixed and fluidized bed reactors). Factors affecting cell culture, Growth monitoring. Genetically engineered cells for bioprocessing; process, selection of host vectors, process constraints- genetic instability, mass transfer and others. Large scale production of insulin by mammalian cell culture. Cellbank preparation & cell reviving techniques.

MONOCLONAL ANTIBODY PRODUCTION: SUDBRCS (Single use disposable bioreactor configuration, types of production (perfusion culture, submerged culture, suspended adhered culture).

Genomics and Proteomics

To build professional competency among students to be mastered in multi-omics data integration and interpret the genomics and proteomics data

After completion of the course, student will be able to:

1. Know about genes, brief history, polymorphism, prediction methods, Biosimilars, business opportunities in diagnostic and medicine. Use tools in DNA sequencing methods and Human genome project,
2. Understand cancer Genomics, Functional and Comparative genomics using model organisms, functional genomics of different organisms and molecular markers, gene and physical mapping techniques
3. To know about Protein structure analysis and molecular interactions
4. Analysis of proteins, quantification, sequencing, identification, protein predictive methods and proteomics in medicine

10 Hrs.

INTRODUCTION Genes and Proteins, Polymorphisms – types of polymorphism, commercializing the Genome - Revenue opportunities: a) genome sequences and database subscriptions, b) prediction of new genes and their function by databases. c) prediction of new genes and their function by databases, d) potential revenue in the area diagnostic and biomedical applications, e) biosimilars market and implications. Sequencing & genome projects: Early sequencing efforts. Methods of preparing genomic DNA for sequencing, DNA sequence analysis methods, Sanger Dideoxy method, Fluorescence method, shotgun approach. Next generation sequencing Genome projects on *E.coli*, Arabidopsis and rice; Human genome project.

10 Hrs.

DNA and RNA alterations in tumors, genomic instability, oncogenes, and tumor suppressors drive oncogenesis. Next-Generation Sequencing (NGS) for distinguishing somatic from germline mutations, and applying this data to precision oncology.

Gene variation and Single Nucleotide Polymorphisms (SNPs) genotyping tools -DNA Chips, comparative genomics. Functional genomic studies with model systems such as Drosophila, Yeast or *C. elegans*. Applications in Functional genomics, medicine and Gene Knockdown. Metagenomics- definition & concept. C-Value and paradox of genomes, Repetitive and coding sequences, Genetic and physical maps, chromosome walking Methods of molecular mapping, Marker assisted selection, map based cloning, Bioinformatics analysis- clustering methods. Approaches to physical mapping.

10 Hrs.

STRUCTURE OF PROTEINS Conformational analysis and forces that determine protein structures, geometries, phi, psi, omega angles, Ramachandran diagram, allowed chi angles of side chains in proteins, hydrogen bonding, disulphide bonds, Vanderwaal's force , salt bridges hydrophobic interactions, alpha helices, beta sheets, helix to coil transition, general features and thermodynamic aspects of protein folding, folding kinetics, protein-ligand interactions (Examples of bio-molecular interactions), fibrous proteins (structure of collagen, keratin) and Quaternary structures.

UNIT-IV	10 Hrs.
PROTEOMICS Introduction to proteomics, Sample preparation, protein extraction Denovo protein synthesis, LCMS/MS, M/Z ratio, sequencing and identification, Predictive Methods using Protein sequences: Protein Identity based on composition, Related web based software (JPRED, PROSEC, NNPREDICT and SOPMA) Proteome analysis "Protein Chip" - interactions and detection techniques, two dimensional PAGE for proteome analysis, Applications of proteome analysis to drug development and toxicology. Crisper-cas. Challenges in proteomics.

	Total Hrs.	:	90		Credits	:	03
Professional Competency:							
Graduate will apply the principles of biofuel science and technology to evaluate feedstocks, production processes, technological innovations, and the economic and environmental sustainability of biofuels for renewable energy applications							
Course Outcomes:							
After completion of the course, student will be able to:							
CO1: Understand the basic principle involved in bioconversion process in energy and to differentiate the conventional fuels with biofuels .							
CO2: Diagnose the types of feed stocks used for biofuels.							
CO3: Produce the biofuels (biodiesel, bio alcohol biogas and biohydrogen) using current technologies and innovations involved							
CO4: Understand and recall current issues related with production and use of biofuels, Research opportunities, economic feasibility of the biofuels							
UNIT-I							10 Hrs.
BIOCHEMISTRY OF BIOFUELS AND ENERGY RESOURCES							
Basic principle of light energy conversion to chemical energy & carbon fixation. Biochemistry involved in conversion of sugars to alcohols. Renewable and non-renewable resources.							
BIOFUELS							
Introduction to Biofuels - definition, advantages and disadvantages. Biofuel life cycle. Biomass as an energy core and its different mode of utilization. Conventional fuels and their environmental impacts. Modern fuels and their environmental impacts. Biofuel energy content. World scenario of biofuel production and use.							
UNIT-II							12 Hrs.
BIOFUEL FEED STOCKS							
Starch feed stocks-cereal grains, tubers & roots; Sugars feed stocks-sugarcane & sugarbeet; cellulosic feed stocks - forest residues, agricultural residues, Agricultural processing by-products, dedicated energy crops, municipal solid waste and paper waste. Lipid feed stocks :-Oilseed crops with examples, Algae, Waste oil, Animal fats. Next generation feed stocks. Environmental impacts of feed stocks.							
TYPES OF BIOFUELS							
First generation biofuels-vegetable oil biodisel, bioalcohols, bioethers, biogas syngas, solid biofuels. Second generation biofuels and third generation biofuels.							
UNIT-III							10 Hrs.
TECHNOLOGIES FOR BIOFUELS							
Historical background. Biochemical platform – bioethanol production, standardization, emissions and properties of bioethanol. Thermochemical platforms - biodiesel production, standardization, properties and emissions of biodiesel. BtL fuels -production, properties and emissions. Biohydrogen processing and uses. Converting solid wastes to pipeline gas. Biomethanation, Microbial fuel cells. Blending of biofuels							
UNIT-IV							10 Hrs.
BIOFUELS IN PERSPECTIVE							

Integrated refining concepts with reference to ethanol production. Economic feasibility of producing biodiesel, Issues with biofuel production & use. Impact of biofuel in global climate change & food production. 1st versus 2nd generation biofuels. Strategies for new vehicle technologies. Current research on biofuel production. Market barriers of biofuels.

Professional Competency:							
Apply biotechnology principles and modern molecular techniques to develop, improve, process, and ensure the safety, quality, and nutritional value of food products while addressing global food security and regulatory requirements.							
Course Outcomes:							
After completion of the course, student will be able to:							
CO1: Explain the principles of food biotechnology, nutrigenomics, novel food bioprocesses, and their role in improving food quality and addressing global food security.							
CO2: Apply microbial biotechnology concepts for the production of food ingredients, enzymes, nutraceuticals, microbial polysaccharides, and fermented food products.							
CO3: Analyze molecular and genetic approaches for improving the nutritional quality, shelf life, and functional properties of plant-derived food products.							
CO4: Evaluate transgenic animal technologies, chloroplast engineering, food safety regulations, genetically modified foods, and intellectual property rights in food biotechnology.							
UNIT-I							10 Hrs.
INTRODUCTION							
Hunger, Technology and World food needs-nutritional problems, approaches to combat world hunger, roles of technology. Recent Developments in food biotechnology, introduction to molecular food biotechnology.							
NOVEL BIOPROCESSING							
Biosensors for food quality assessment, cold active enzymes in food processing, biotransformation in food industries.							
NUTRIGENOMICS							
Definition of Nutriomics, Nutrigenetics, and its applications, Nutritional genomics and applications in brief. Nutrigenetics and cancer.							
UNIT-II							11 Hrs.
MICROBIAL BIOTECHNOLOGY OF FOOD							
Metabolic engineering of bacteria for food ingredients (Amino acids, organic acids, vitamins). Introduction to technologies for microbial production of food ingredients. Solid-state fermentation for food applications (enzymes, pigments). Biotechnology of microbial polysaccharides- natural occurrence of microbial polysaccharides in foods, additives (xanthan) and its future, Microbial biotechnology of food flavor, oils and fats. Food applications of algae-nutritional value, source of nutraceuticals and industrial production processes (chlorella, spirulina, Agar, alginate). Genetics of Dairy starter cultures.							
UNIT-III							11 Hrs.
PLANT FOOD APPLICATIONS							
Genomic basics for food improvement, molecular design of soybean proteins for enhanced food quality, Genetic modifications of plant starches, plant oils, for food applications. Bioprocessing of starch using enzyme technology. Molecular biotechnology for nutraceutical enrichment of food crops, Biotechnology of nonnutritive sweeteners, metabolic redesign of vitamin -E biosynthesis, production of new metabolites, Engineering of provitamin- A ,biosynthetic pathway into rice(Golden rice), Engineering of carotenoid							

biosynthesis for antioxidants, approaches to improve nutritional quality and shelf life of fruits and vegetables.

UNIT-IV

10 Hrs.

Enhancement of leaf quality protein for ruminant animals. Methods of chloroplast transformation, markers for transformation, engineering chloroplast for the production of edible vaccine, Transplastomic maize- a case study.

ANIMAL FOOD APPLICATIONS: Genetic modification of production traits in farm animals, Foods made from GM animals, applications of transgenic fish technology in sea food production, enzymatic synthesis of oligosaccharides-progress and recent trends.

FOOD SAFETY: international aspects of the quality and safety, [genetically modified food controversies](#). Regulation of the release of genetic modified organisms, patenting inventions in food biotechnology.

Professional Competency:								
Ability to apply mathematical, kinetic, and engineering transport principles to size, select, model, and operate scaled industrial bioreactor systems, translating cell line requirements into functional, stable, and highly productive automated fermentation equipment.								
Course Outcomes:								
After completion of the course, student will be able to:								
CO1: Bioreactor Fundamentals & Configurations: Analyze microbial, plant, and animal cell rate expressions alongside fundamental material and energy balances to select and categorize appropriate bioreactor configurations for submerged and solid-state fermentations.								
CO2: Operational Management & Control: Identify and optimize critical environmental and physical control factors required to ensure the smooth, aseptic operation of bioreactors handling free or immobilized biocatalysts and shear-sensitive cultures								
CO3: Sizing and Design of Submerged Systems: Formulate kinetic and transport design equations to size, configure, and evaluate the performance parameters of industrial Batch, Fed-Batch (Semi-continuous), and continuous flow (CSTR and PFR) bioreactors.								
CO4: Advanced Reactor Synthesis: Design specialized bioreactor configurations—including cell recycle loops, multi-stage cascading systems, and packed/fluidized beds—to maximize product yields in enzyme reactions and highly demanding biological processes.								
UNIT-I							10 Hrs	
BASICS OF BIOREACTORS								
Overview of bioreactions, Elements in bioreactor design, Rate expression in biological systems, Basic concept of material and energy balances, Development and significance of bioreactors, Bioreactor configurations, Classification of bioreactors, Bioreactors for solid-state fermentation, plant and animal cell cultures								
UNIT-II							10 Hrs	
Common operations of bioreactor, Identification of common factors for smooth operation of bioreactors, Spectrum of basic bioreactor operations, Bioreactor operation for immobilised systems, plant and animal cell cultures.								
UNIT-III							12 Hrs	
BATCH, SEMICONTINUOUS AND CONTINUOUS BIOREACTOR DESIGN								
Overview of bioreactor design, Batch and semi-continuous bioreactors for submerged fermentation of microbes, Continuous flow stirred tank and plug flow tubular bioreactors for submerged fermentation of microbes, Recycle bioreactors, Multistage bioreactors, Bioreactors for enzyme reactions and immobilized systems								
UNIT-IV							10 Hrs	
CASE STUDIES AND SCALE-UP								
Design of packed bed, fluidized bed, airlift, hollow fibre, plant cell, mammalian cell bioreactors for various applications, Scale=up – Criteria, Similarity criteria, Methods, Generalized approaches.								
Reference Books:								
1. PBioreactor Design and Product Yield: Authors: BIOTOL Series (Butterworth-Heinemann).								

2. Solid-State Fermentation Bioreactors: Authors: David A. Mitchell, Dr. Marin Berovič, and Dr. Nadia Krieger (Springer).
3. Bioreactor Engineering Research Horizon: Author: Samuel R. Catcheside (Nova Science Publishers).

Professional Competency:							
Assess renewable energy technologies and biodiversity conservation approaches for sustainable development							
Course Outcomes:							
After completion of the course, student will be able to:							
CO1: Analyze current environmental issues, environmental impact, bioaccumulation processes, and sustainable development concepts.							
CO2: Apply principles of environmental biotechnology for wastewater treatment, solid waste management, and pollution control.							
CO3: Evaluate bioleaching, biomining, and bioremediation technologies for environmental restoration and resource recovery.							
CO4: Analyse biofuel production technologies and biodiversity conservation strategies for sustainable environmental management.							
UNIT-I						12 Hrs	
Introduction:							
Current Environmental Issues and scope of Environmental science and technology biogeochemical role of soil microorganisms, Bioconcrete, Environment Impact Assessment							
Bioaccumulation of toxicants							
Characteristics of Xenobiotics, Relationship of Bioaccumulation with Chemical Structure, Ecophysiology of Bioaccumulation Process of toxicants uptake, Factors affecting bioaccumulation, measurement of bioaccumulation							
Sustainable future: Green building concept, Carbon foot print, crediting, trading and its calculation, Water foot print Rain water harvesting .							
UNIT-II						10 Hrs	
Waste water treatment:							
Waste water characteristics BOD, COD, Primary & Secondary treatment, nanofiltration. Ultrafiltration and microfiltration Microbial removal of phosphorous and Nitrogen Wastewater treatment of industries like sugar factories, food industries, beverages industries, and distilleries.							
Solid waste management							
Basic aspects, general composition of municipal solid wastes, aerobic treatment, anaerobic treatment biogas generation Solid waste management. Hazardous wastes, Biomedical Wastes, E waste management, MoEF rules.							
UNIT-III						10 Hrs	
Bioleaching & Biomining:							
Microbes in Bioleaching- types, methods of bioleaching, Microbial recovery of phosphate, petroleum.							
Bioremediation:							

Major contaminants of air, water and soil, Biomonitoring of environment (Bioindicators), Bioremediation using microbes, Phytoremediation, Biofilms its applications Bio-stimulation of Naturally occurring microbial activities, Bio-augmentation

UNIT-IV

10 Hrs

Biofuels:

Definition, Renewable and nonrenewable resources Advantages and disadvantages of biofuels Biofuel feed stocks-sugar starch, cellulose, lipid Types of biofuel- first, second and third generation Technologies for bio-fuel production-transesterification, gasification 2G technology, Biomethanation, Issues of biofuel production and its use. Microbial fuel cells.

Biodiversity: Value of biodiversity, threats to biodiversity approaches of biodiversity conservation

22UBT625E	VALIDATION , QA and QC	Credits: 3
L: T: P – 3-0-0		CIE Marks: 50
Total Hours/Week: 03		SEE Marks: 50

UNIT-I	10 Hrs.
Introduction Validation and Regulatory Affairs in Bio (Pharmaceutical) Manufacturing: An Introduction to FDA Operations & Industry Compliance Regulations, The Fundamentals of Regulatory Compliance with respect to Good Clinical Practice (GCP), Good Manufacturing Practice (GMP) & Good Laboratory Practice (GLP). An Introduction to the Basic Concepts of Process Validation & Qualification (IQ, OQ & PQ) Procedures, A Review of Prospective, Concurrent, Retrospective Validation & Revalidation . Validation of Water, Packaging Validation , Cleaning validation, Validation Master Plan, FAT,SAT.	
UNIT-II	10Hrs.
, Validation of Analytical Methods, Validation of HVAC systems, Thermal system validation Computerized & Automated Systems The Influence of Good Automated Manufacturing Practice (GAMP). Standards Introduction, <u>ISO 9000 Series</u> of Standards, Management Responsibility, Quality System, Contract Review, Design Control, Document and Data Control, <u>ISO-9001-2000</u> , Scope, Normative Reference, Terms and Definitions, Quality Management, System, Documents Requirements, Management's Responsibility, Resource Management, Infrastructure, Product Realization, Measurement, Analysis and Improvement, <u>ISO-14001-2000</u> , Scope, Normative Reference, Terms and Definitions, Quality Management.	
UNIT-III	10 Hrs.
Quality Control :Quality System, Quality Objectives, Quality Policy, Quality Planning, Quality Control, Quality Assurance, Quality Improvement, Handling, Storage, Packaging, Preservation and Delivery, Control of Quality Records, Internal Quality Audits, Training, Servicing, Statistical Techniques.	
UNIT-IV	10 Hrs.
Quality Terminology Relating to Quality, Quality Requirement, Customer Satisfaction, Capability; Terms Relating to Management, Management System, Quality Management System, Continual Improvement, Effectiveness, Efficiency; Relating to Process and Product, Process, Product, Procedure; Terms relating to Characteristics, Quality Characteristics; Terms Relating to Conformity, Non-Conformity, Defect, Preventive Action, Corrective Action, Correction, Rework, Regrade, Repair, Quality Manual, Objectives of Quality Assurance and its role in Pharma industries.	
REFERENCE BOOKS*	
1. Pharmaceutical Process Validation, 3rd Edition, Edited by Robert Nash and Alfred Wachter, Marcel Dekker, 2003 2. Good Manufacturing Practices for Pharmaceuticals: A Plan for Total Quality Control From	

Manufacturer to Consumer, Sidney J. Willig, Marcel Dekker, 5th Ed., 2000, 723 pp.,

3. Validation of Pharmaceutical Processes: Sterile Products, Frederick J. Carlton (Ed.) and James Agalloco (Ed.), Marcel Dekker, 2nd Ed., 1998.
