

Course Code	:	1BPHS102C/202C	QUANTUM PHYSICS AND QUANTUM COMPUTING (CS, IS, AIML & BT) (Integrated)	Semester	:	I/II
L : T : P	:	3:0 :1		Course Type	:	IPCC
Hours Sem	Teaching	:		CIE Marks	:	50
	Learning (TW+SL)	:		SEE Marks	:	50
	Exam	:		Total Marks	:	100
	Total Hrs	:		Credits	:	04

Professional Competency:

Apply quantum mechanics principles to conductors, superconductors, laser and quantum computing.

Course Outcomes:

After completion of the course, student will be able to:

CO1: Apply the quantum mechanics principles and properties of conductors for engineering applications.

CO2: Apply appropriate properties of superconductors and semiconductors for engineering applications.

CO3: Apply appropriate properties of laser and type of optical fiber for engineering applications.

CO4: Apply basic principles of quantum computing for engineering applications.

Unit – I**11 Hrs****Quantum mechanics:**

Introduction, de Broglie hypothesis and its derivation, matter waves and its properties, quantization of energy levels, Phase velocity and group velocity, relation between group velocity and particle velocity. Heisenberg's uncertainty principle and its physical significance (no derivation), Application of uncertainty principle (nonexistence of electron in the nucleus-relativistic), Principle of complementarity, Wave function and its properties, Derivation of one dimensional time independent Schrodinger's wave equation. Physical significance of a wave function and Born interpretation, Expectation value and its physical significance. Eigen functions and eigen values. Applications of Schrodinger's wave equation - eigen functions and energy eigen values of a particle in a one dimensional potential well of infinite height, role of higher dimensions, waveforms and probabilities. Numerical problems.

Electrical properties of metals :

Introduction, failures of classical free electron theory, Matthiessen's rule, assumptions of quantum free electron theory, Fermi energy, Fermi-Dirac statistics, density of states (qualitative), Fermi factor, variation of Fermi factor with temperature and energy, success of quantum free electron theory. Numerical problems.

Unit – II**10 Hrs****Superconductivity:**

Introduction to superconductors, temperature dependence of resistivity in conductors and superconductors, Meissner's effect, critical magnetic field, temperature dependence of critical magnetic field, Silsbee effect. Formation of cooper pairs, Two-fluid model, BCS theory and its limitations, Type-I and Type-II superconductors, high temperature superconductors, quantum tunneling, Josephson junction, flux quantization, DC and AC(RF) SQUIDS. Applications of superconductors in quantum computing: charge, phase and flux qbits. Numerical problems.

Semiconductors :

Introduction, Fermi level in intrinsic and extrinsic semiconductor, expression for concentration of electrons in conduction band and holes concentration in valance band (no derivation), relation between Fermi energy and energy gap in intrinsic semiconductors (derivation), law of mass action, electrical conductivity of a semiconductor (derivation), Hall effect, expression for Hall voltage and Hall coefficient (derivation) and its applications. Numerical problems.

Unit – III**10 Hrs****Photonics:**

Laser:

Introduction, interaction of radiation with matter (absorption, spontaneous emission and stimulated emission), Einstein's coefficients (derivation for energy density), conditions for laser action, requisites of a laser system, working mechanism, characteristics of a laser, classification of lasers. Construction and working of Nd:YAG and semiconductor diode lasers. Applications of lasers- laser bar code scanner, laser printer and laser cooling, Mach-Zehnder interferometer. Numerical problems.

Optical fibers:

Introduction, principle and structure, propagation mechanism in optical fibers, angle of acceptance, numerical aperture and its derivation. Modes of propagation (qualitative), V number and number of modes, types of optical fibers, attenuation and fiber losses. Applications-optical fiber communication system and fiber optic networking. Numerical problems.

Unit – IV**11 Hrs****Quantum Computing:**

Introduction to quantum computing, Moore's law and its violation, limitations of VLSI, classical vs quantum computation. Quantum system as a qubit and its properties. Representation of qubit on Bloch sphere, two and multi qubit systems. Dirac representation and matrix operations: Dirac's bra-ket representation of quantum states $|0\rangle$ and $|1\rangle$, their matrix forms. Inner product- proof of orthonormality of quantum states using matrix notation and basis. Outer product- density matrix representation of single and two qubit systems. Unitary matrices- Pauli matrices and their operation on single and two qubit systems. Hermitian operator. Numerical problems

Quantum gates:

Single qubit gates: quantum NOT gate, Pauli –X,Y and Z gates, Hadamard gate, phase gate - S and T gates. Multiqubit gates: control and target qubit, CNOT gate (discussion for 4 different input states), swap gate, controlled Pauli –X,Y and Z gates, Toffoli gate and Fredkin gate

Practical Module**28 Hrs**

01	Determination of wavelength of LASER using diffraction grating.
02	Determination of acceptance angle and numerical aperture of the given optical fiber.
03	Study the characteristics of a photodiode and to determine the power responsivity.
04	Determination of Planck's constant using LEDs.
05	Determination of Fermi energy of copper.
06	Determination of energy gap of the given semiconductor.
07	Black-box experiment (Identification of basic electronic components)
08	Resonance in LCR circuit.
09	Characteristics of a bipolar junction transistor.
10	Determination of resistivity of a semiconductor by four probe method.
11	Determination of dielectric constant of the material in a capacitor by charging and discharging method.
12	Interference by the division of amplitude(Air wedge/Newton's rings)
13	Predicting the outputs of various combinations of single and two qubit gates using QUIRK quantum simulator.
14	Predicting the outputs of various combinations of single and two qubit gates using QISKIT.
15	Data analysis using spread sheets.
16	PhET simulations.

Note: i) Introduction lab/Mock test

ii) Any ten experiments are to be conducted from the above list.

iii) Tow Virtual/simulation labs
